9	Provisions were clarified in more detail, information about the CallBack interface was added
10	Provisions were clarified in more detail
11	Chapter 11 was changed in its entirety: new sequence diagrams were added together with a detailed description
13.2	Provisions were clarified in more detail
Swagger Basic API	<ol style="list-style-type: none"> 1. New parameters (psuIdentifierType, psuIdentifierValue) of the structure "RequestHeaderWithoutToken" were added, which - next to the "isCorporateContext" parameter - are to define the context of the xs2a interface methods called, and in particular to narrow down this context to a single PSU. 2. AS (Authorization Service) was added, including the following methods: /authorize, /authorizeExt, /token. 3. A detailed definition of the 'scope_details' structures and their use in the AS service methods were included in the basic API. 4. Changes to the scope_details structure were made: <ol style="list-style-type: none"> a. new, missing consent - ais:accounts

Specification of an interface for the needs of services provided by third parties on the basis of access to payment accounts

	<ul style="list-style-type: none"> b. two new structures for the AIS consents which do not require the provision of the number of days for which the history is to be retrieved (PrivilegeAisAspspInSimple, PrivilegeAisAspspOutSimple) and their connection within the scope_details structure to appropriate consents 5. A comment concerning the TPP's identifier format (client_id) was deleted. 6. The mandatory (required) character of the transfer sender's account number field was deleted from the transfer initiation requests. 7. The 'order data' attribute was deleted. 8. Parameters: payee's account number and transfer sender's account number and the payee's name and the transfer sender's name, constituting a part of the response returned by the AIS service in case of transaction history request were marked as not required - related to comments No.: 83-86, considering their conditional character. 9. A new structure - 'SocialSecurityPayor' - was introduced to replace the 'Payor' structure within the structure of the 'TransactionInfoZUS' response to the 'getTransactionDetail' method. 10. Technical changes consisting in the clarification of the swagger definition and the elimination of the so-called anchors were made.
Swagger API Callback	<ul style="list-style-type: none"> 1. AIS service was added, including the following methods: /accountsCallBack, /transactionsDoneCallBack, /transactionsHoldCallBack, /transactionsPendingCallBack, /transactionsRejectedCallBack 2. AS (Authorization Service) was added, including the /authorizeExtCallBack method 3. Technical changes consisting in the clarification of the swagger definition and the elimination of the so-called anchors and object referencing were made.
